From copycat to early bird: Taking stock of China's 5G ambitions

China coordinated its approach to 5G and some successes are already visible. However, China still relies on imports, especially for high-end products, leaving the sector exposed to protectionist threats. Moreover, the deployment of 5G networks by Chinese companies is perceived as a cybersecurity risk by many recipient countries. The US is banning Huawei equipment and pressing its allies to do the same, which could limit the growth of Chinese 5G in the future.

The early bird gets the worm

After having had to play catch-up in the era of 3G and 4G, the Chinese government has put special emphasis on the development of 5G technology. The government launched the IMT-2020 5G promotion group in 2014 aiming to bring together all players in the ecosystem to create synergies and improve cooperation. It has also supported investment in the sector, notably by creating the National Integrated Circuit Industry Investment Fund in 2014. The goal is to have its home grown chip industry expand from USD 65 billion in 2016 to USD 305 billion in 2030. In the context of a supportive policy framework, Chinese companies have been able to increase private sector R&D at a fast rate.

China's coordinated approach to promoting 5G will help many Chinese companies to benefit from the country's first-mover advantage. It is estimated 40% of patents for current 5G network standards are from Chinese firms. Moreover, Chinese companies are set to benefit from 5G. Huawei is the global leader in network infrastructures; it currently holds 29% of the market. Furthermore, 5G is expected to trigger a cycle of mobile phone replacement, and three out of the five global mobile phone leaders are Chinese: Huawei, Xiaomi and Oppo. According to the China Academy of Information and Communications Technology (CAICT), the 5G market could account for 3.2% of Chinese GDP, representing USD 166 billion by 2025.

China's 5G ambitions face challenges

1) Protectionism under the US-China trade war

In the unfolding trade war between the US and China, electronics are specifically targeted by tariffs: 51% of the USD 200 billion worth of Chinese imports subject to 25% tariffs are electronics, including 23.5% of mobile phones. US tariffs worsen the terms of trade of Chinese exports vis-à-vis their largest market. This incentivises US companies and consumers to diversify demand away from China. Besides, Chinese 5G technologies companies are still reliant on imports of key components. This leaves Chinese companies exposed to supply chain risks. And in May 2019, the US announced it would ban Huawei and its affiliates from buying parts and components from US companies without

US government approval. This could cause large disruptions in Huawei's supply chain considering that around 16% of its components came from US firms in 2018.

2) Cybersecurity risks

The deployment of 5G networks by Chinese companies is perceived as a security risk by many potential recipient countries. A number of countries, led by the US, argue that using Huawei 5G network infrastructure poses a threat, as backdoors could grant the Chinese government access to sensitive data on foreign companies and consumers. Answering these demands of security and transparency guarantees is a major challenge for Huawei and all Chinese tech firms.

3) Technology has its limits

The applications of the technology will take years before unified SA 5G networks are in place. The GSM Association forecasts that only 14% of all connections will be 5G-powered by 2025. There is a long way to go before 5G is the new telecommunication standard.

'China has rapidly become a big player in 5G technology but remains reliant on imports of high – end products. This leaves the sector exposed to protectionist threats.' said Pauline Weil, Coface's Junior Economist. *'5G is currently receiving a lot of attention given political considerations, but banning Chinese firms altogether reduces competitiveness in the sector, which makes it a costly decision that is bound to clash with private operators' interests.'* said Carlos Casanova, Coface's Economist for the Asia Pacific Region.

Coface: for trade - Building business together

70 years of experience and the most finely meshed network have made Coface a reference in credit insurance, risk management and the global economy. With the ambition to become the most agile global trade credit insurance partner in the industry, Coface's experts work to the beat of the world economy, supporting 50,000 clients in building successful, growing and dynamic businesses. The Group's services and solutions protect and help companies take credit decisions to improve their ability to sell on both their domestic and export markets. In 2018, Coface employed ~4,100 people in 100 countries and registered turnover of €1.4 billion.
